# TeleTracking's Wireless Bed Management Strategy on Display at ASHES

*Mobiles Help Speed Bed Turnover, Increase Patient Flow*

2007 Annual ASHES Conference and Marketplace

PITTSBURGH--(BUSINESS WIRE)--TeleTracking's exclusive **BedTracking mobile™**, the industry's only bed tracking tool for handhelds, will be displayed at Booth #407 during the 2007 Annual **ASHES** Conference and Marketplace September 30-October 4, in St. Louis, MO.

**BedTracking mobile™** transfers the gold standard performance of **BedTracking™** to a PDA so environmental services supervisors can avert patient flow problems and speed bed turnover from anywhere in the hospital. The wireless version provides real-time bed status, including pending transfers and discharges. Users communicate directly with staff via 'taps' on the PDA screen. Other features include 'alerts' when bed cleaning requests are delayed, re-assigning tasks on the fly, and much more.

It is one of several wireless patient flow solutions either in service or soon to be available as part of TeleTracking Technologies' expanding mobile strategy, which is based on the recognition that to avert patient flow problems, supervisors sometimes need to be on the move instead of at a desktop PC.

## About TeleTracking Technologies

TeleTracking Technologies, the world leader in automated solutions which relieve hospital overcrowding, provides software and process redesign services that make real-time patient flow management possible. This includes streamlined bed turnover, faster patient placement, improved patient transport, and reduced patient backlogs. The privately-held, Pittsburgh-based company now has over 1400 installations in more than 700 hospitals and health systems in the United States, Canada and the United Kingdom.
