

Community Placement™

Are patients in your hospitals waiting too long for post-acute care?

Improve Patient Access to Timely Post-Acute Care

For most health systems, discharging patients to post-acute is a time-consuming and inefficient process. Improving timely access in this area yields major benefits: it frees up resources in your acute care facilities, improves patient and family satisfaction, and enhances relationships and coordination across care settings.

If these are priorities for your health system, TeleTracking can help. Our new Community Placement solution streamlines post-acute access, by giving case managers and discharge planners real-time visibility to available beds in your post-acute facilities.

It provides more seamless care transitions to post-acute, and extends our proven access and capacity management best practices beyond the walls of your acute facilities.

Benefits for Patients & Families

- ▶ Patients spend less time waiting to be discharged to post-acute
- ▶ A traditionally frustrating experience becomes more direct, transparent, and predictable
- ▶ Patients and families are more satisfied with their care and your health system

Benefits for Your Preferred Post-Acute Providers

- ▶ They gain a direct referral pipeline from your acute facilities, increasing volume and decreasing time spent competing for referrals
- ▶ They gain visibility to incoming patients and tools to manage patient flow
- ▶ They're able to help facilitate better care coordination across care settings, potentially aiding readmission rates

BENEFITS FOR YOUR HEALTH SYSTEM

- More timely discharges to post-acute can help significantly decompress your acute care facilities
- Better care coordination across your health network provides a more positive, consistent patient and family experience
- Increased discharge efficiency helps improve length of stay and readmission metrics
- Stronger connections to your post-acute providers help you keep patients in your health network, increasing revenue and market share

Patients are happier & get the care they need in a more timely and coordinated manner

Families feel more secure & confident in the placement of their loved ones

Hospital caregivers can focus more time on their patients with acute needs

Your preferred post-acute facilities increase patient referral volumes

Your health system keeps more patients in-network and improves coordination across the continuum
